

SOVEREIGN
— W A R D E N —

CONCEPT · JULY 2026

Private AI for organisations that can't use Claude.

Before the numbers — why private AI for regulated Australian firms is inevitable, and where we sit in the landscape.

Market →

Position

Confidential — for accredited investor discussion only

Client confidentiality is **already at risk.**

Staff are using public AI today. Firms can't prove client information stayed confidential — and the pressure is rising.

Shadow AI

Client data pasted into Claude / ChatGPT without oversight.

Broken privacy agreements

Cross-border processing that clients never consented to.

No client assurance

Firms cannot guarantee confidentiality when asked.

Policy pressure

Incoming government / Privacy Act expectations raise the bar.

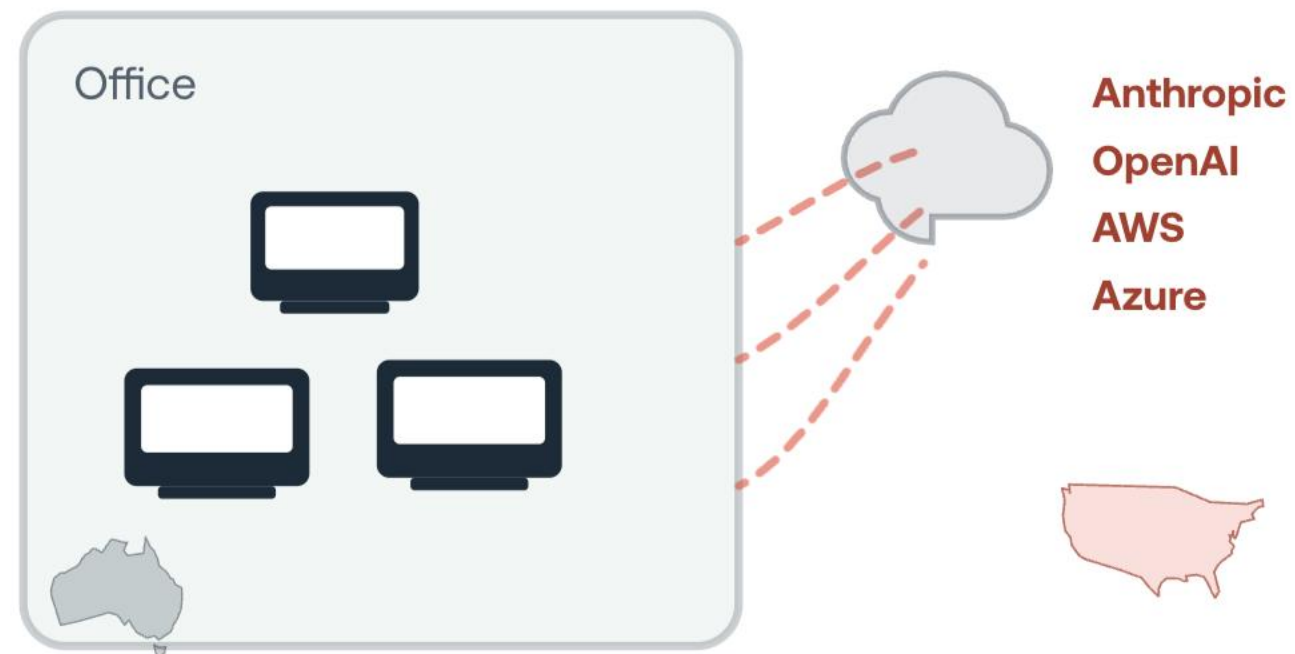

Cost vs ROI

Seat licences and API spend climb while outcomes stay unclear.

Inference has to stay **inside the firm.**

Your prompts never leave the office.

Cloud assistants ship client data offshore. On-prem keeps inference inside your walls.

Leaves the building

Staff → cloud providers → overseas model

Stays on-prem

Staff → your rack → answers stay local

Models converged. Racks became reachable.

Open source met frontier capability. The cost of a capable inference box fell with it — so owning the rack is a real option.

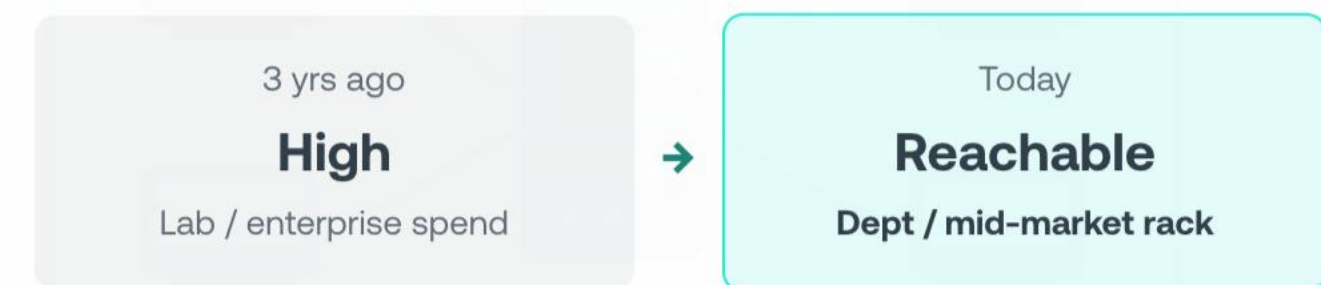

1 · CAPABILITY

Open source catching frontier

2 · HARDWARE COST

A capable inference box

Open source on your own server rack is now a viable path.

MARKET • TOMORROW

The shift from renting intelligence to **owning** it.

OPTION • 100 USERS	INITIAL	ONGOING	3-YEAR	5-YEAR
Claude / Copilot	A\$0	A\$90,200/yr	A\$270,000	A\$451,000
Sovereign Warden Upfront	A\$61,000	A\$3,000/yr	A\$70,000	A\$76,000
Sovereign Warden Rent to Own	A\$0	~A\$30,333/yr	A\$91,000	A\$98,800

PRODUCT · VERTICALS

The AI decisions are **already made** for your industry.

Prefabricated turnkey packs — integrations, agents, and workflows tuned per vertical. Not a bespoke build. Not a consulting journey.

AVAILABLE ON

INTEGRATIONS

 Microsoft 365	 Atlassian	 Google Workspace	 Xero	 MYOB
 LEAP	 Clio	 Iress Xplan	 Midwinter	 SharePoint

Capability by capability.

Product features mapped across Claude (Team / Enterprise) and Sovereign Warden.

FEATURE	CLAUDE	SOVEREIGN WARDEN
Chat assistant	✓ Web, iOS, Android, desktop	✓ Desktop app
Projects / workspaces	✓ Files + custom instructions	✓ Isolated workspaces
Document upload & Q&A	✓ PDF, images, files	✓ Bulk ingest
RAG with source citations	~ Project files	✓ Day 1
Artifacts & generated outputs	✓ Docs, code, apps	~ Chat responses
Cross-session memory	✓ User + project scoped	~ Workspace context
Web search	✓	—
Code assistant	✓ Claude Code, IDE plugins	—
MCP / tool connectors	✓ Slack, M365, Drive, custom	~ Roadmap
Multi-model routing	✓ Opus, Sonnet, Haiku	✓ LiteLLM gateway
Agent workflows	✓ Managed agents, Cowork	✓ Agent workspaces
SSO & RBAC	✓ Team / Enterprise	~ RBAC Day 1; SSO roadmap
Audit logs	~ Enterprise	✓ Prompt & request logs
AI cost dashboard	—	~ LiteLLM usage logs
Inline policy enforcement	—	—
Shadow AI discovery	—	—
Self-hosted / on-prem	—	✓ Profile switch
Air-gap deployment	—	~ Roadmap
Client branding	—	✓ Logo, name, theme

Capability by capability.

Product features mapped across Claude (Team / Enterprise) and Sovereign Warden.

ADNEO · PILOT ASK

Pilot Adneo to sharpen the offer.

I know the firm inside out — what AI needs to do here, and how to ship it.
This is a live build you are delivered and own.

1 · WHAT I NEED

The inference box, plus my time at my current full-time rate for the pilot.

2 · WHAT YOU GET

A working Sovereign Warden implementation inside Adneo — with full shareholder visibility end to end.

3 · WHAT I ASK NEXT

Help open the doors that turn this pilot into the next conversations.

Delivered in 90 days — then we decide together. Build once in Adneo. Prove it. Then sell the package.

The window is open for productised sovereign AI.

Market proof exists (Cetus, Premya, Macquarie). The gap is speed, UX, and accessible pricing for firms too small for enterprise governance-first journeys.

Regulation

Privacy Act scrutiny

Economics

Copilot seat shock at scale

Proof

Sovereign AI vendors validate demand
